

Acid Buf for Horses

V 16463

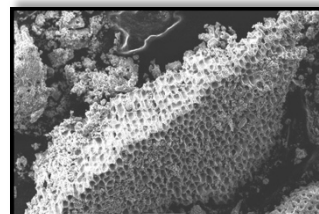

Description

Acid Buf is a highly bioavailable calcium and magnesium source derived from calcified seaweed. Acid Buf provides bioavailable calcium and magnesium to horses and can stabilize the stomach environment.

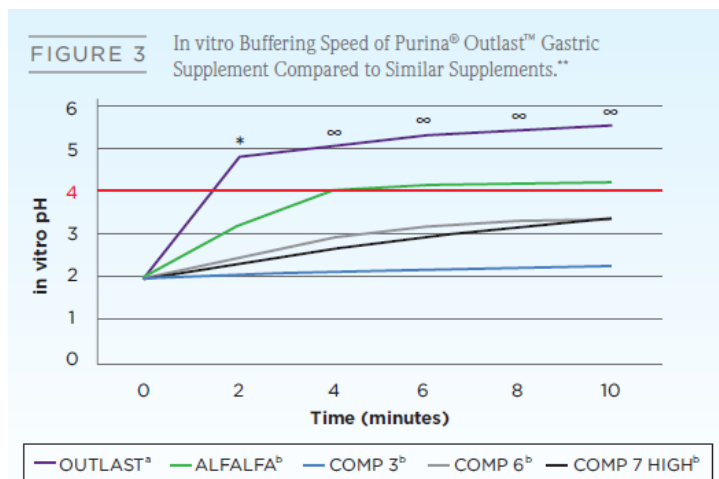

Features

- Acid Buf assists with maintaining an optimal stomach pH range
- Acid Buf has a high acid absorbency in the pH range of 7 – 5.5.
- Absorbs more than twice amount of acid as sodium bicarbonate.
- Contains Calcium (30%), Magnesium (5.5%) and other minerals.
- Fine particle size/honeycomb structure/large surface area.

Benefits

- Buffer the gastric acid in the stomach, producing a more favorable gastric environment and reducing the potential for gastric ulceration
- Reduced risk of EGUS, and reduced severity of EGUS should EGUS occur
- Improved gut integrity through strengthening of tight junctions and desmosomes
- Improved skeletal development in young foals
- Does not result in a positive TCO₂

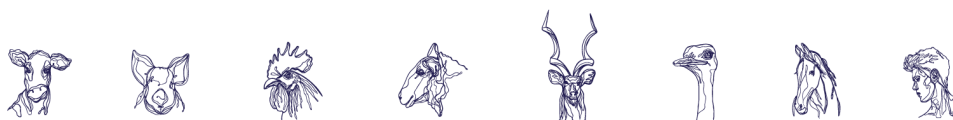

Applications

Target Feeds	Recommended intakes of Acid Buf/head/day
Horse diets	50 - 75 g/h/d
