

XTRACT Ruminant

(X60-7065) v 21630

Description

XTRACT Ruminant is a blend of three different natural essential oils namely: Eugenol from Clove, Cinnamaldehyde from Cinnamon and Capsicum from chili pepper. It acts as a natural alternative to in-feed growth promoters and plays a role in alleviating heat stress.

Features

- Manufactured in accordance with ISO Fusion Technology ensuring:
 - Homogeneous distribution and flow-ability
 - Stability, uniformity and analytical traceable
 - Thermally protected by a retention agent
- Proven mode of action.
- Compliant with EU regulations, free of GMO and animal products, FAMI-QS certified.

Benefits

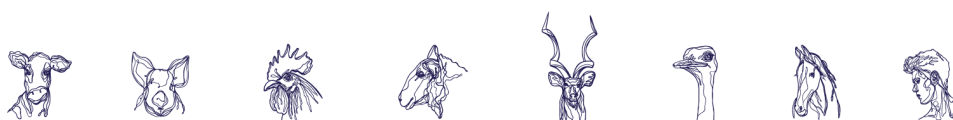

- Improves ruminant performance and condition
- Natural replacement for Ionophores
- **Eugenol:**
 - ⇒ Decrease C2:C3 ratio → Increase propionic acid and butyric acid → increased energy from the diet
 - ⇒ Decrease acetic acid production → decrease methane production
 - ⇒ Increase the number and or activities of amylolytic and cellulolytic bacteria.
- **Cinnamaldehyde:**
 - ⇒ Decreases ammonia nitrogen by inhibiting protein degradation at deamination and peptidolysis.
 - ⇒ Accumulation of amino acids and short chain peptides increases microbial protein synthesis.
- **Capsicum:**
 - ⇒ Similar effect to Eugenol in terms of energy metabolism.
 - ⇒ Fractionate feed intake, increase saliva production, reduce the risk of large rumen pH changes.
 - ⇒ Alleviate heat stress by stimulating water intake and increasing vasodilation of veins and arteries.
 - ⇒ Vasodilation of arteries and veins improves blood and nutrient flow to the organs.

Applications

Dairy cows and feedlot cattle	1.0 g / animal / day
Sheep	0.3 g / animal / day
