

Description

Lipidol Ultra is a hydrolysed lecithin with emulsifying and other biological applications on an inert carrier. It contains naturally occurring soybean phospholipids and lysophospholipids. Lecithin in Lipidol Ultra disperses in oils and forms emulsions in aqueous systems.

Features

- A standardized source of lysophospholipids combination (6%) in powder form.
- Contains LPC, LPI, LPE and LPA.
- Matrix value:
 - 65 – 100 kcal/kg feed
 - 3% CP for final feed
- Manufactured in UK.
- EFSA approved.
- Shelf life of 24 months.

Benefits

- Increase LPL concentration in the cell membrane, increasing the fluidity of the membrane
- Accelerate nutrient absorption by increasing the protein channel functions in the cellular membrane
- Enhance the tight junction protein, goblet cell and morphologies in the intestinal membrane, improving gut integrity
- Improve fat and oil utilization by emulsifying the fat and oil particles in the gut.
- Optimise animal performance and animal healthy by including Lipidol Ultra on-top as a standard in your diets or save feed cost and resources by reformulating with the matrix value.

Applications

Target Feeds	Recommended intakes
Monogastric	0.25 – 0.75 kg / ton final feed
